Asset Management

Portfolio company performance and value creation

Agent: **Private Equity**

OPENING PROMPT

```
Give me an overview of our portfolio company performance. Which companies are on track and which need attention?
```

The demo date is the latest price date in the Snowflake Public Data share at build time, and positions are month-end. Agents answer from live data, so figures, names and rankings in your environment can differ from the examples in this script.

Business Context Setup

Persona: Elena Lindqvist, Portfolio Director at APX Partners
Business Challenge: PE portfolio teams need to monitor portfolio company performance, track value creation initiatives, and prepare for board meetings with comprehensive analysis. Traditional processes require consolidating data from multiple portfolio companies, manual board pack preparation, and time-consuming performance reviews.
Value Proposition: AI-powered portfolio intelligence that combines financial KPIs, value creation plan tracking, and board pack analysis in a unified interface, enabling proactive portfolio management and better board engagement.

Agent: `AM_private_equity_copilot`
Data Available: 6 portfolio companies (5 active, 1 exited), 16 value creation initiatives, monthly board pack metrics

Demo Flow

Scene Setting: Elena is preparing for quarterly portfolio reviews and needs to understand which companies are on track, which value creation initiatives need attention, and what the key discussion points should be for upcoming board meetings.

Step 1: Portfolio Overview

User Input:

PROMPT

```
Give me an overview of our portfolio company performance. Which companies are on track and which need attention?
```

Tools Used:

- `value_creation_analyzer` (Cortex Analyst) - Query portfolio metrics from SAM_PE_VALUE_CREATION_VIEW

Expected Response:

- Five active companies, combining latest board-pack financials, initiative status and KPI health
- **On track**: ConsumerBrands Nordic (all initiatives On Track, no Red or Amber KPIs) and GreenEnergy Systems (all initiatives On Track, one Amber KPI, budget miss worth watching)
- **Needs attention**: NordicTech Solutions (most Red KPIs plus an At Risk initiative — the biggest concern), MedDevice Pro (the only Behind initiative and the highest leverage), LogiFlow DACH (an At Risk initiative and the largest value-creation prize)
- Most initiatives On Track; risk concentrated in the two APX IX names and LogiFlow

Talking Points:

- Single view across entire portfolio
- Automatic performance flagging
- Budget variance tracking

Key Features Highlighted:

- Multi-company portfolio analytics
- KPI threshold monitoring
- Status categorization

Step 2: At-Risk Initiative Scan

Presenter Transition:

> *"Before I zoom in on any one company, I want the portfolio-wide picture: which value creation initiatives are at risk or behind, and how much EBITDA does that put at risk?"*

Reasoning: The overview flags companies; quantifying total EBITDA at risk across all initiatives sets the priority order for the deep-dives that follow.

User Input:

> **PROMPT**
>
> `Which value creation initiatives are at risk or behind schedule?`

Tools Used:

- `value_creation_analyzer` (Cortex Analyst) - Query initiatives with Status = 'At Risk' or 'Behind'

Expected Response:

- Three initiatives flagged, with total EBITDA impact at risk calculated:
  - **MedDevice Pro — FDA 510(k) Clearance** (Behind): no US revenue yet, so the US thesis is stalled
  - **LogiFlow DACH — DACH Region Sales Push** (At Risk): revenue ramp well short of target
  - **NordicTech Solutions — Cloud Infrastructure Optimization** (At Risk): infrastructure cost improved but stalling short of target
- The two revenue-growth plays carry most of the EBITDA at stake
- Offers board-pack commentary on the MedDevice delay or a LogiFlow ramp drill-down

Talking Points:

- Proactive identification of at-risk initiatives
- Quantified EBITDA impact at risk
- Early warning for management intervention

Key Features Highlighted:

- Status-based filtering
- EBITDA impact calculation
- Priority recommendations

Step 3: Value Creation Tracking

Presenter Transition:

> *"NordicTech Solutions is flagged in both the overview and the at-risk scan. Let me understand what's happening with their value creation plan..."*

Reasoning: Portfolio overview identifies issues; value creation tracking diagnoses root causes and initiative status.

User Input:

> **PROMPT**
>
> ```
> What's the status of NordicTech Solutions' value creation initiatives? Are there any
> at-risk workstreams?
> ```

Tools Used:

- `value_creation_analyzer` (Cortex Analyst) - Query value creation plan status for NordicTech Solutions

Expected Response:

- Four initiatives, three On Track (SaaS Migration, Sales Team Expansion, Product-Led Growth) and one At Risk (Cloud Infrastructure Optimization)
- Root cause for the at-risk workstream from the board pack: the legacy cloud migration slipped because the billing platform could not be re-platformed on time, and dual-running has held costs up; mitigation is an external migration partner and a new FinOps lead
- The at-risk status has been unchanged across recent board packs — not yet trending back
- Unprompted: revenue behind budget, falling net revenue retention and Red people KPIs also warrant board attention

Talking Points:

- Granular initiative tracking
- Early warning on at-risk workstreams
- EBITDA impact quantification

Key Features Highlighted:

- Value creation plan analytics
- RAG status tracking
- Impact measurement

Step 4: Board Pack Analysis

Presenter Transition:

> *"The Cloud Infrastructure Optimization initiative is flagged At Risk. Before the board meeting, I need to understand the full financial picture from their latest board pack..."*

Reasoning: Value creation tracking shows initiative status; board pack analysis provides complete financial context for board discussion.

User Input:

> **PROMPT**
>
> ```
> What are the key metrics from NordicTech Solutions' latest board pack? How are they trending
> vs budget and prior year?
> ```

Tools Used:

- `value_creation_analyzer` (Cortex Analyst) - Query board pack metrics
- `search_board_packs` (Cortex Search) - Search board pack documents for context

Expected Response:

- Latest board pack: revenue has swung from ahead of budget over the summer to **behind budget**, EBITDA margin at its thinnest of the recent window, **net revenue retention falling** to roughly flat, leverage creeping back up; customers and headcount still growing
- KPIs vs budget and prior year: three Red — Customer Satisfaction, **Employee NPS** (also down year-on-year) and Employee Turnover; On-Time Delivery Amber; Carbon Intensity Green
- Management ties the reversal to transformation-programme strain, with attrition in engineering and commercial roles and a CHRO engagement plan due

Talking Points:

- Comprehensive board pack synthesis
- Budget and YoY comparisons

- Management narrative integration

Key Features Highlighted:

- Board pack data aggregation
- Multi-period comparison
- Document search for context

Step 5: Investment Thesis Validation

Presenter Transition:

> *"Revenue has slipped behind budget, retention is falling and the people metrics are Red. Let me step back and assess whether the original investment thesis is still intact..."*

Reasoning: Current performance analysis must be viewed against original investment thesis to assess whether the deal is on track for planned returns.

User Input:

> **PROMPT**
>
> ```
> Is NordicTech Solutions' investment thesis still valid? How does current performance
> compare to our entry assumptions?
> ```

Tools Used:

- `value_creation_analyzer` (Cortex Analyst) - Compare current metrics to entry assumptions
- `search_board_packs` (Cortex Search) - Search for strategic updates and thesis validation

Expected Response:

- Entry assumptions: a Digital Transformation thesis for an enterprise SaaS business in APX IX, with the entry multiple and implied entry EBITDA
- **Verdict: thesis broadly intact, but execution is drifting** and the near-term trajectory has weakened
- Validating: the thesis-defining workstreams are On Track and earnings have grown since entry
- Straining: revenue behind budget and NRR falling (the key flag for a SaaS thesis), margin compression, the stuck cost initiative, Red people KPIs in the functions that drive the thesis, and leverage leaving little slack
- Recommended discussion points for the board

Talking Points:

- Investment thesis validation framework
- Value creation attribution
- Exit planning perspective

Key Features Highlighted:

- Entry vs current comparison
- Thesis drivers versus watch items
- Strategic assessment

Scenario Wrap-up

Business Impact Summary:

- **Portfolio Visibility**: Performance across all portfolio companies, refreshed on the demo's weekly cycle (board pack metrics monthly, KPIs quarterly)
- **Proactive Management**: Early warning on at-risk initiatives
- **Board Effectiveness**: Comprehensive preparation in minutes
- **EBITDA Protection**: Total EBITDA at risk quantified across initiatives, enabling prioritisation
- **Value Creation Focus**: Clear tracking of EBITDA impact

Technical Differentiators:

- **Multi-Company Analytics**: Unified view across diverse portfolio
- **Value Creation Framework**: Structured initiative tracking with impact measurement

- **Board Pack Intelligence**: AI-powered synthesis of financial and operational data
- **Investment Thesis Tracking**: Automated comparison to entry assumptions
